🔗 Portfolio

👤 Summary

Penetration tester with four years of professional offensive security experience across web, mobile, API, network, and thick client environments. Recognized in bug bounty programs at Google, Sony, IBM, Pfizer, and Epic Games. Android security specialist with expertise in dynamic instrumentation, APK reverse engineering, and exploit development. Currently leading a government security engineering team in Eastern Province, Saudi Arabia.

🧰 Professional Experience

2025/01 – Present
Dammam, Saudi Arabia

Cyber Security Engineer

Eastern Province Eamana 🏢

- Led a team of three engineers overseeing the security of government hardware, software systems, and critical networks.
- Directed daily technical operations, ensuring all assessments, configurations, and security controls met high-assurance standards.
- Provided advanced technical guidance on system hardening, network defense, and vulnerability analysis across multiple environments.
- Acted as the primary escalation point for complex issues, making final decisions on mitigation steps and validation procedures.
- Delivered finalized security reports to the project manager, communicating key risks, impact, and recommended remediation strategies.

2024/09 – 2024/12
Saudi Arabia

Penetration Tester (Contract)

CyberGulf 🏢

- Performed penetration testing on web, mobile, and API projects to identify and report security issues.
- Created internal guidelines to standardize and improve the team's penetration testing process.
- Acted as a bridge between the technical team and sales, helping translate client needs into technical tasks.
- Assisted the sales manager during meetings to define project scope, feasibility, and delivery timelines.
- Helped plan and communicate the testing process from initial contact to final report.

2024/02 – 2025/02
Dammam, KSA

Cybersecurity Consultant

Pentix 🏢

- Conducted security assessments on web, mobile, network, API, and thick client environments to identify vulnerabilities and recommend mitigation strategies.
- Worked closely with clients to enhance their security posture through penetration testing, risk analysis, and security best practices.

- Researched emerging threats and attack vectors to develop innovative security solutions.
- Collaborated with a team of cybersecurity professionals to deliver high-quality security services.

2022/12 – 2023/12

LA, USA (Remotely)

Security Researcher

Resecurity 

- Comprehensive cybersecurity projects focusing on web, API, and mobile applications.
- Vulnerability Identification: Employed cyber intelligence techniques to uncover and assess vulnerabilities.
- Network and Security Audits: Conducted thorough audits using industry-standard criteria to ensure system integrity.
- Tool Utilization: Leveraged automated tools for scanning applications and identifying potential security threats and weaknesses.
- Continuous Learning: Kept abreast of IT trends and security standards, constantly enhancing professional knowledge.

Projects

BreachPilot

- Developed an AI-assisted autonomous penetration testing platform focused on proof-based vulnerability validation rather than signature-only detection, reducing false positives through controlled exploitation workflows
- Implemented modular offensive security testing capabilities covering web vulnerabilities including SSRF, LFI, XSS, command injection, IDOR, XXE, SQL injection, open redirects, and cloud metadata exposure analysis
- Designed a scalable exploitation and correlation engine featuring concurrent execution, contextual risk analysis, shared-state evidence tracking, and structured reporting aligned with OWASP Top 10 and modern application security methodologies

reconHarvest

- Built a modular Python reconnaissance framework for subdomain enumeration, port scanning, secret discovery, takeover detection, and attack surface mapping
- Developed concurrent multi-stage scanning pipelines with automated asset correlation and evidence collection
- Integrated screenshot capture, technology fingerprinting, and CORS analysis for external security assessments

Skills

Offensive Security

Web app pentesting, API exploitation, network pentesting, thick client, Active Directory attack paths, mobile (Android)

Android Security

Frida, MobSF, Drozer, APKTool, JADX, Burp Suite (mobile intercept), dynamic instrumentation, malware analysis, APK reverse engineering

Web & API Tools

Burp Suite Pro, FFUF, SQLMap, Nikto, Nuclei, Metasploit, custom exploit scripting

Active Directory

Domain enumeration, privilege escalation, Kerberoasting, Pass-the-Hash, BloodHound, PowerView

Methodologies

OWASP Web/API/Mobile Top 10, PTES, CVSS 3.1 scoring, STRIDE threat modeling (foundational)

Programming

Go, Python, Bash, PowerShell, C/C++, Java & JavaScript

Capture The Flag (CTF) and Cybersecurity Competitions

Actively involved in CTFs, demonstrating skills in real-world cybersecurity challenges, like Black Hat.

Professional Certificates

- eLearnSecurity Mobile Application Penetration Tester (eMAPT) [↗](#)
- API Certified Expert (ACE) [↗](#)
- Certified Application Security Practitioner (CAP) [↗](#)

Acknowledgements

Hall Of Fame:

Google VRP, Sony, Nominet, IBM, Global, Pfizer, TIDAL, Montea & Epic Games.

Education

Khartoum, Sudan

Bachelor Degree, Computer Engineering (Ongoing/InProgress)
EL-Neelain University
